

## GreenOil filter solutions for new state-of-the-art Wasaline ferry reduces CO2 emission

Wasaline - the first separator free RoPax ferry in the world. By replacing traditional lubrication oil and fuel oil separators with a filter solution from GreenOil Standard ApS the energy consumption will significantly be reduced. This contributes to the Wasaline RoPax ferry to be among the world's most efficient and environmentally sustainable ships by reducing the CO2 emission, with an estimated +16 ton/year when running on LNG, using the filtration systems instead of the separators.

In addition to the environmental aspect Wasaline gets pure cost saving in operational cost and maintenance.

"This is a milestone for GreenOil and for Septor, the GreenOil distributor for Finland and Estonia. First newbuilding in Finland that will be equipped with GreenOil filter units, first RoPax that is fully equipped, first LNG driven newbuilding. We have sold for many applications as retrofit to shipowners in our region but this one is a major breakthrough" says Fredrik Björklöf, Managing Partner at Septor.

"We decided to go for a filter solution from GreenOil because of simplicity, operational reliability and ease of use" says Jonas Teir, Technical Manager at Wasaline.

### Septor Oy

Established in 2006 as a supplier of quality equipment and spare parts to the marine industry. Started working with GreenOil in 2017 and have in this short period 15 customers and +40 units sold. We work together with our customer with a long-term focus to create a partnership with mutual benefit.

### GreenOil standard ApS

Manufacturer and designer of the most efficient water separation on the market and solutions also for engine LO, MDO/MGO instead of traditional separators with several economic and operational benefits
