VARD Søviknes, Norway new building 905 for HAVFISK, Norway

As experience with high demands for the separators engine lubrication oil and diesel, HAVFISK decided for their new builds to install GreenOil filtration systems instead of separators, where there on the vessel will not be any separators.

GreenOil have supplied to VARD Søviknes 1x WP1-P1-1000 for engine lubrication oil on the Bergen BRM-9 on 4800 kW and 2x WP1-C1-1000 for diesel to the engine settling/day tank.

HAVFISK look forward to use a simple filtration system, than separators with high demands and require high technical skills. GreenOil is a simple technology, efficient and reliable.

The crew can now benefit of only replace the filter elements with out using tool, without oil spill and without any oil contact – secure a good and healthy working environmental.
